

## 2-Factor Strong Authentication with VASCO aXsGUARD Identifier for Citrix Web interface

Experience in 2 days the benefits of aXsGUARD Identifier

### Why 2-Factor Authentication?

2-factor Authentication is just much more secure. With the implementation of VASCO aXsGUARD Identifier you can increase the security level of your environment for your remote users, local desktop users in both physical and virtual environments

### How? By implementing a VASCO aXsGUARD Proof of Concept

To explore and discover the possibilities of Identifier, we help you to build a small environment. In this environment you will discover the benefits of using two-factor authentication combined with Citrix Web interface and windows Logon. The PoC architecture will be built within your own environment to create an as realistic possible situation.

### What we will do for you

#### Day 1

- Kick off meeting: setting the goals for the Poc and giving an overview of the aXsGuard Identifier
- Installation of aXsGuard Identifier and preparing for use in customer network
- Setup Identifier as RADIUS, create policy and client
- Create Web interface site that uses Radius and AD to authenticate
- Test policy and authentication with OTP
- Setup 5 test users
- Explaining how to create users and assign tokens

#### Day 2

- Evaluation workshop of half a day
- Defining "next steps"

## The proposed environment

## Possible extensions

You can even **enrich the Proof of Concept aXs Guard Identifier** by adding other services you would like to test.

- Second Identifier for redundancy
- Installation with Citrix Access GateWay Standard or Enterprise
- Alternative installation of IdentiKey Server instead of aXs Guard appliance
- Setup strong two-factor authentication for Windows Logon

## 10 reasons to request a PoC

1. Strong protection of any point-of-access to your corporate infrastructure and data.
2. Time-based strong authentication generating unique access codes on the fly.
3. Strong authentication with little to no impact on your current infrastructure.
4. Fully Active Directory integrated without changes to the AD.
5. Scalable from 5 to +10.000 users
6. Extensive logging to reduce helpdesk reaction times
7. No need for a password policy in Active Directory
8. No additional software, services,... required plug-and-play
9. Banking security for your environment
10. Highly available solution to maximize user productivity
