

Solution Brief:

EVault Plug-n-Protect

The Fastest Path to Comprehensive Data Protection

Businesses of all sizes are experiencing explosive data growth. From small businesses with only one location to large businesses with multiple locations, data protection and business continuity are becoming increasingly critical. And, the value of your data – and the costs of losing it – is growing exponentially.

- 2GB of data is lost every minute of every day *
- 93% of companies that suffer significant data loss are out of business within 5 years**

It's essential that businesses have a solid, reliable data protection solution. The **EVault Plug-n-Protect** backup and recovery appliance provides an easy-to-use, cost effective all-in-one solution that ensures your business critical data is always available when you need it. **EVault Plug-n-Protect** is a complete backup and recovery appliance that includes:

- pre-configured hardware
- operating system
- storage
- a complete suite of EVault software products

EVault Plug-n-Protect is the fastest path to comprehensive data protection. Businesses can seamlessly deploy EVault software solution with less effort and at a significantly lower cost than purchasing the components separately. You'll benefit from a single point of contact for your software, hardware and storage support. And you can easily and economically add backup storage capacity as your infrastructure becomes more complex and your data grows.

EVault Plug-n-Protect Features

1. **All-in-One** – Everything you need to set up your own data protection solution: Director, agents, plug-Ins, central management, de-duplication and System Restore (BMR) are standard features.
2. **Fast, Simple Deployment** – saves procurement, setup and installation time.
3. **Single Solution for System and Data Recovery** – Receive complete system restore with EVault System Restore.
4. **Economical Expansion** – Scalability to meet your existing and future data protection needs. Easily add drives to increase capacity.
5. **Built on GREEN technology** – AutoMAID (Massive Array of Idle Disks) allows the storage system to place its disk drives into an idle state to conserve energy while still providing near-instantaneous access to data.

Why EVault Plug-n-Protect?

EVault Plug-n-Protect is an outstanding value, offering more features for the price and providing a complete selection of agents and plug-ins to match your specific environment.

EVault Plug-n-Protect allows you to apply different recovery policies to different groups of systems and data to provide a true tiered recovery architecture – saving you money by optimizing data protection costs based on the value of the data.

Fast Installation - Simplifying Deployment and Management

- Customers save up to two weeks of work during procurement, installation and configuration
- Consistent configuration at each location lessens the learning curve and minimizes the possibility for human error
- A single contact for both hardware and software support eliminates confusion over who to call

Economical for Today's Budgets - More Value at a Lower Cost

- Each appliance model comes with a complete suite of EVault Software - including the Director a generous number of Agents and Plug-ins, and Central Control - EVault System Restore, and in some models, EVault Real Time Protection
- Delta processing and backend deduplication is included
- A year or more of hardware and software support is included

One Complete Solution for System and Data Protection

- Comprehensive protection of a customer's specific heterogeneous environment
- Customers get both data recovery and full system restore together
- Customers can easily add up-to-the-minute protection for mission-critical systems

Available Agents and Plug-ins

- Choose ANY combination of EVault Agents including Microsoft Windows, Linux (Red Hat or SUSE), ESX Server, Netware, Solaris, AIX, IBMi and HP-UX.
- Choose ANY combination of EVault Plug-Ins including Microsoft SQL Server, Exchange Server and SharePoint, Oracle on Solaris, Oracle on Windows, VMware Console, OFM and OTM.
